

■ Custom.wraps_ – Luxury Gifting Website

Custom.wraps_ is a responsive and visually attractive gifting website created for a home-based customized gifting business. The website showcases personalized and handcrafted gift products for different occasions.

■ About the Project

Custom.wraps_ provides a simple and attractive way for customers to explore customized gifting products. The website focuses on customized gifts, flower bouquets, chocolate arrangements, gift hampers, surprise boxes, special-occasion gifts, and delivery across India.

■ Website Features

Section	Features
Home	Luxury gifting landing section, tagline, email input and Get Started button
About Us	Business introduction, personalized gifts, occasions and delivery information
Products	Product cards with images, names and Order Now buttons
Contact	Name, email and message form with Send Message button

■ Products

Chocolate Bouquet • Artificial Rose Bouquet • Hamper Box • ClawClips Bouquet • Cutouts • Flowercard • Happy Moments Bouquet • Hotwheels Bouquet • KinderJoy Bouquet • Kitkat Bouquet

■■ Technologies Used

Frontend: HTML5, CSS3, Bootstrap 5.0.2

Typography: Google Fonts / Poppins

Tools: Visual Studio Code, Git and GitHub

■ Project Structure

```

■■■ Cutouts.jpg
■■■ Flowercard.jpg
■■■ HappyMoments.jpg
■■■ Hotwheels.jpg
■■■ KinderJoy.jpg
■■■ Kitkat.jpg
```

■ Design & UI

The website uses a pink-based visual theme, sticky navigation, responsive Bootstrap grid layouts, product cards, hover effects, gradient backgrounds, responsive images and a contact form.

■ Responsive Design

Bootstrap's responsive grid system is used to adapt the website to different screen sizes. Product cards use Bootstrap column classes so products can display in multiple columns on larger screens and stack on smaller screens.

■ How to Run the Project

1. Download or clone the repository.
2. Open the project folder in Visual Studio Code or another HTML editor.
3. Make sure index.html, style.css and all referenced images are present.
4. Open index.html in a browser or use VS Code Live Server.

■ GitHub Pages Deployment

Create a public GitHub repository, upload index.html, style.css, README.md and all required image files. Then open Settings → Pages, choose Deploy from a branch, select the main branch and / (root), and save. GitHub Pages will publish the static website.

■ Future Improvements

Shopping cart • Online payment • WhatsApp ordering • Order tracking • Customer login • Order confirmation • Product search • Price display • Customer reviews • Admin dashboard • Database integration • Mobile application

■ Project Purpose

This project demonstrates practical frontend web-development skills including HTML, CSS, Bootstrap, responsive web design, UI/UX design, website structure and navigation.
